Forecast for Wednesday 03 Aug 2022

Weather: A band of patchy rain and drizzle will move southeastwards through the morning. This may be heavy at times and will bring low cloud and poor visibility, and fog over the highest peaks. As the band of rain clears the National Park, the cloud will lift and break leaving a dry and bright afternoon for most, with plenty of prolonged sunny spells, especially in the east. Strong southwesterly winds will ease through the day, becoming light westerlies by late evening.

Chance of cloud-free hill tops above 600m: 20%, increasing to 80% by early afternoon.

Low cloud and visibility: Extensive low cloud at 300-400m will lift and break up through the morning. By early afternoon, there will be scattered cloud, bases 800-900m, with patches of lower cloud possible on windward slopes. Poor visibility in any hill fog during the early morning, but quickly improving below any cloud and throughout the afternoon.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Strong winds are likely in the early morning, with gusts up to 40mph on exposed summits. This will give difficult walking conditions with a risk of being blown off balance. Appropriate clothing will also be required for heavy and persistent rain and drizzle in the early hours, with poor visibility making navigation more challenging. As the cloud breaks up into the afternoon, UV levels will be moderate during any prolonged sunny spells, particularly in the east, so some sun protection may be necessary.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Tue 02 Aug 2022	5.6mm	5.6mm	15.2mm

Forecast for Thursday 04 Aug 2022

Weather: Some early mist and fog will clear quickly through the morning. A few isolated showers may bring some patchy light rain at times in the west during the morning, but these will clear leaving a dry and bright day with plenty of prolonged sunny spells, especially in the east of the National Park.

Maximum wind: Westerly wind, becoming northwesterly by midday. 10-15mph with gusts of 15-20mph.

Chance of cloud-free hill tops above 600m: Some early morning mist and fog in the valleys may lift to cover the slopes and peaks for a time. Through the morning, cloud will break up and continue to lift above the summits by mid-morning.

Low cloud and visibility: 60%, increasing to 90% by mid-morning.

Temperature: **Valleys:** Plus 12 Celsius rising to Plus 21 Celsius.
At 600m: Plus 8 Celsius rising to Plus 12 Celsius.
Freezing level: Well above all summits.
